

Yalçıncañ Ulus

Full-Stack Developer

📍 Türkiye | ✉ yalcincan.ulus@gmail.com | 🌐 ulus.uk | 🔗 linkedin.com/in/yalcincan | 🐙 github.com/yalcincanulus

Summary

Full-stack engineer specializing in the TypeScript ecosystem (React, Node.js, Bun). Ships complete products end to end: PostgreSQL schema design, background job pipelines, real-time features, auth, and Docker deployments on Linux. Uses AI tools to move faster while owning architecture and code review.

Skills

Languages: TypeScript, JavaScript, SQL, HTML/CSS

Frontend: React, TanStack (Router, Query, Start), Vite, Tailwind CSS

Backend: Node.js, Bun, Express, REST APIs, WebSockets

Data: PostgreSQL, Redis, MongoDB, Drizzle ORM, BullMQ, S3

DevOps & Tools: Docker, Docker Compose, Linux, Git, GitHub Actions, Turborepo, Playwright, Vitest

Spoken: Turkish (native), English (full professional proficiency)

Projects

Bitig Flow: Document Sharing & Analytics Platform

2026

Node.js, TanStack Start, React 19, PostgreSQL, Drizzle, Redis, S3 (Garage), Better Auth, Docker. [Source](#)

- Built a DocSend-style app to share documents via links with per-link gates (password, email, or OTP-verified email).
- Built reader analytics (visits, unique viewers, per-page time, PDF completion, downloads) with salted-hash visitor IDs.
- Secured with Argon2 passwords, Redis rate limits, upload checks, team roles, and a TOTP-protected admin panel.

Automated Price Tracking Platform

2026

Bun, Turborepo, React, PostgreSQL + TimescaleDB, Redis, BullMQ, Playwright, Typesense, Sentry. [Source](#)

- Built a BullMQ scraping pipeline for 27+ grocery sites in 19 countries using per-site Playwright or Cheerio strategies.
- Stored prices and FX rates in TimescaleDB hypertables; gap-filled time-bucket queries drive price trend charts.
- Four apps in one Turborepo (internal API, admin dashboard, public API, storefront) with Typesense search.

Social Media Platform

2025 – 2026

Bun, Turborepo, React, TanStack Router, PostgreSQL, Drizzle, Redis, MinIO (S3), WebSockets, Docker. [Source](#)

- Shared types end to end from the Bun API to the React frontend, so API changes fail at compile time.
- Built real-time WebSocket notifications, virtualized cursor-based feeds, follow/block systems, and S3 image uploads.
- Deployed with Docker Compose on a Hetzner VPS using multi-stage images built from turbo prune output.

Multiplayer Location Guessing Game

2024 – present

Bun, PostgreSQL, Drizzle, Redis, BullMQ, d3-geo, OpenStreetMap, Docker. [Source](#)

- Actively played since 2024 (2,000+ games, 35,000+ guesses); players race to name a location's country or province.
- Built collusion detection that flags player pairs with suspicious win patterns for admin review.
- Game state in Redis, stats in PostgreSQL, scheduled jobs in BullMQ, maps drawn with d3-geo; ships as a Bun binary.

Experience

Frontend Developer, Freelance Client (Restaurant Industry) – Remote

May 2024

- Built a mobile-first [digital menu app](#) for a restaurant in Cambodia with React, TypeScript, and Tailwind CSS.

Education

The Odin Project, Full Stack JavaScript curriculum (completed)

Istanbul Technical University, MSc in Earthquake Engineering

- Wrote the simulation software for my thesis; co-authored a paper in *Buildings* (MDPI, 2023), [cited 20+ times](#).

Sakarya University, BSc in Civil Engineering
